 2 of 32 Internal
 10 of 32 VPUC
 5 of 32 SAP GenAI Certified

Sector-agnostic

-  **EY.ai Contract Authoring:** streamlines contract creation by providing real-time formulation and clause generation.

-  **EY Automated Feedback and Learning for SAP SuccessFactors:** consolidates feedback for an employee from various stakeholders and proposes a career growth plan.
-  **EY Autonomous Supply Chain Planning:** provides demand forecasting, integrating both internal and external data.
-  **EY Composites AI Hub:** helps product architects select the optimal technology stacks from vendor partners.
-  **EY Data Migration Tool for SAP SuccessFactors:** simplifies HR data migration from legacy systems, automating validation, transformation, and mapping.
-  **EY Enterprise Dashboard Center:** consolidates data for CFOs, featuring an AI voice assistant for informed decision-making.

-  **EY ERP Agent powered by SAP:** provides stakeholders with on-demand access to critical business insights through advanced AI.
-  **EY ESG Materiality Manager:** evaluates the effects an organization has on the environment and society.

-  **EY Finance Data Hub - Reconciliation:** automates and streamlines data comparison to identify and resolve discrepancies.

Sector-agnostic

-  **EY HR Assistance with Social Media Integration:** integrates with social media, enhances candidate experience, streamlines recruitment, and provides insights for hiring and employee satisfaction.
-  **EY Infrastructure Optimization Tool:** automates user management and system provisioning, enhancing efficiency and reducing costs for organizations.
-  **EY IntelliGEN SAP Support:** integrates the S/4 system with a chatbot to analyze errors, identify causes, and offer guided or automated corrections.
-  **EY Intelligent Dispute Manager:** transforms dispute handling, enhancing efficiency and improving customer experience.

-  **EY Intelligent Working Capital Dashboard:** analyzes KPIs and proposes strategies to improve an organization's working capital, delivering insights that enhance productivity and accelerate business decisions.
-  **EY Sales & Service Assistance with Social Media Integration:** integrates social media across sales and service, analyzing interactions for actionable insights and improved customer experiences.
-  **EY Smart Automation Hub:** creates automation and workflow bots across all S/4 HANA modules.

Sector-agnostic

-  **EY Smart Candidate Sourcing and Ranking for SAP SuccessFactors:** streamlines hiring by categorizing candidates as 'best fit,' 'moderate fit,' or 'low fit,' ensuring optimal selections.

-  **EY Smart Customer Experience:** empowers businesses to optimize allocation and increase agent productivity.
-  **EY Smart Data Prediction:** provides intelligent data correction assistance for automatic error correction of journal entries.
-  **EY Smart Inspection and Maintenance:** aids field engineers with data access, inspection tasks, and document searches.
-  **EY Smart Onboarding App:** makes the virtual employee onboarding process experience driven, automated, organized, and efficient.
-  **EY Smart Package Tracer:** helps companies detect counterfeit products in their supply chain.
-  **EY Smart Rule Generator:** generates complex business rules based on data sources, enhancing efficiency for business teams and consultants during assessments.

-  **EY Translation Hub:** automates product translations, all translations are stored in a database for future use.

Consumer & Health

-  EY Sales Quote Discounts Predictor: automates
-  AI-generated pricing for quotes, predicting optimal discounts using historical data refined by LLM.

Industrials & Energy

-  EY Customer Communication Agent: enables customers to connect with businesses anytime, on any channel.
-   EY Manufacturing Defects Guard: enhances defect management and serial number tracking
-  EY Revenue Assurance as a Service: streamlines the fraud detection processes for utility companies, significantly improving efficiency.
-   EY Smart Customer Experience for Utilities: delivers insights on product performance, market trends, and forecasts.
-  EY Smart Industrial Asset Suite: monitors and manages industrial assets with real-time data.
-  EY Smart Utilities FERC Assistance: a query chatbot for the Federal Energy Regulatory Commission repository.
-    EY Tailings Storage Facility Management: collects and manages facility data, streamlining compliance and auditing processes.

EY.ai Contract Authoring

EY.ai Contract Authoring is addressing the unique challenges organizations face in the contract management space, including managing geopolitical risks that impact contract creation and adapting enterprise-specific language models to their contract authoring needs. This solution delivers real-time contract formulation while mitigating risks, utilizing advanced machine learning (ML) technologies for clause extraction, and generating new clauses using pre-trained large language models (LLMs) that leverage an enterprise-specific rules and repository. This method ensures efficiency and risk reduction, offering a scalable and Sector-agnostic solution. With its user-friendly interface and artificial intelligence (AI) capabilities, enhanced by human in the loop, it provides simplified yet powerful contract management capabilities with significant cost benefits.

Business purpose

- The business purpose of using EY.ai Contract Authoring extending SAP® Ariba® is to streamline and automate the contract creation.
- It allows businesses to generate contracts more efficiently, ensuring compliance and reduce errors.
- Addresses the lack of solutions to mitigate geopolitical risks during contract creation
- It solves the problem of long lead time to finalise contracts as well as the growing need to create contracts with improved legal language by leveraging standards like contract templates
- Addresses the missed opportunities in doing Contracts as a Service in Managed Services Support with large volumes outcomes.

Business benefits

- Efficiency:** Help streamline contract creation processes, reducing manual effort and saving time.
- Accuracy:** By automating contract creation and enforcing predefined rules, to minimize errors and help ensure compliance with legal and regulatory requirement.
- Cost savings:** Through automation, helps reduce contract lifecycle costs and minimize contract-related risks.
- Scalable:** Scalable Sector-agnostic solution, easy to use and the solution places people at the centre for approvals
- Identify requirements:** Understands the needs and goals of the contract, including all parties involved, terms, conditions, and objectives.
- Template management:** Offers a solution to build a library of contract clauses specific to industries and purposes, streamlining the drafting process and helping ensure compliance.
- Automated compliance checking and other features:**
 - Helps ensure that contracts adhere to legal standards and regulations, minimizing errors and risks.
 - AI-driven data extraction and Global Search
 - Complement SAP Ariba – real-time risk-mitigated contract creation
 - New contract clauses generation
 - using pre-trained LLM
 - Database for maintaining enterprise-specific contract clauses
 - User-friendly review and editing interface for approval with semantic search capability
 - Responsible AI with harm data exclusion using curated prompt
 - Real-time risk mitigation at contract generation
 - Enterprise-specific clauses
 - Semantic search capability acting as legal co-pilot
 - Clause comparison feature
 - Integration with SAP Ariba with generative AI (GenAI) capability
 - Clause similarity score
 - Visualization of clauses for strategic purchaser and data scientist
 - Dynamic clause generation using LLMs
 - Large volume contract creation.
 - Retrieval augmented generation.
 - Fine-tuning of LLMs support the creation of enterprise-specific clauses
 - Simplicity of application and hence easy to use
 - Solution with people at the centre
 - Efficient management of risks and costs for customers
 - Efficiency gain using GenAI capability

EY Automated Feedback and Learning for SAP SuccessFactors

EY Automated Feedback and Learning for SAP SuccessFactors aims to help create a personalized career growth portfolio for each employee, allowing for individual tracking. By consolidating feedback from multiple channels and stakeholders, the solution utilizes artificial intelligence (AI) algorithms to comprehend and summarize the feedback. Generative AI (GenAI) analyzes the feedback to identify areas for improvement and automatically suggests the necessary trainings and learning opportunities in the form of a career growth portfolio.

Business purpose

- Will help organizations to adapt to changing business needs and industry trends. Employees learn new skills, stay updated, and remain agile in their roles.
- To provide a seamless experience for employees. This customized generated career growth portfolio will allow employees to access learning content directly from the PMGM platform, helping ensure that performance goals align with ongoing learning and development.
- EY enhancements to SAP SuccessFactors® existing product to make the solution more user friendly and allowing clients to drive success with performance and learning faster

Business benefits

- A learner-centered approach recognizes that each employee has unique learning needs, preferences, and career aspirations. By tailoring performance management to individual learners, organizations can provide targeted learning opportunities.
- Encourage employees to take ownership of their development. They actively seek out learning resources, participate in training programs, and engage in self-directed learning.
- Help reduce time spent collating and analyzing performance feedback so employees can focus on the recommended learning and development opportunities.

Key features

- Consolidating the qualitative feedback from all channels and performance data, employees can quickly see all positive and constructive feedback in a single location.
- GenAI scans the qualitative feedback from all channels and providers to generate a crisp feedback summary to reduce time spent in identifying development areas.
- Employees can enhance their skills, stay updated with industry trends and contribute more effectively to their roles using customized career growth portfolios that direct employees to EY Learning Recommendations based on feedback.

EY Autonomous Supply Chain Planning

EY Autonomous Supply Chain Planning a feature of EY Intelligent Consumer uses a custom machine learning model that integrates both internal and external data to deliver highly accurate demand forecasts. It automatically adjusts forecasting parameters for specific products, locations, and customer segments, enabling smarter, faster, and more responsive supply chain decisions.

Business Purpose

- The current supply chain planning process is impacted by fragmented systems, inconsistent practices, and a lack of realtime global demand visibility, which fails to account for external factors in demand forecasting.

Business Benefits

- Data-Driven Decisions:** Empowers organizations to make informed decisions based on comprehensive data analysis, including external factors often overlooked by standard solutions.
- Supply Chain Agility:** Enhances the ability to quickly adapt to changing market conditions and potential disruptions, ensuring continuous business operations.
- Operational Efficiency:** Streamlines supply chain processes by aligning them with real-world performance metrics and external influences, reducing waste and inefficiencies.
- Risk Reduction:** Lowers the risk of supply chain disruptions through advanced predictive analytics and proactive supplier management.

Key Features

- Lead Time Variability:** Based on true, not contract, lead times. This helps with better planning, results and improved customer satisfaction. In addition to internal data such as supplier delivery performance, this algorithm also considers external factors such as wars, strikes, and natural disasters to determine more precise lead times.
- Supplier Reliability Index:** This index ranks comparable suppliers in a supply chain and helps planners understand where potential risks may exist in the future. The index leverages KPIs like lead time, variances between committed and required quantities and other external variables. This helps determine whether a company needs to change, diversify, or consolidate its suppliers.

EY Composites AI Hub

Composites AI is an innovative platform leveraging artificial intelligence to empower product architects in selecting the optimal technology stack from a curated network of vendor partners. Composites AI is designed to revolutionize how product architects select technology stacks, transforming a traditionally complex and time-consuming task into a streamlined, efficient process. By harnessing the power of artificial intelligence, the platform delivers data-driven insights and recommendations, enabling architects to make informed decisions with confidence. The goal is to enhance productivity by significantly reducing research and evaluation time, thereby accelerating project timelines.

Business Purpose

- Optimize Technology Selection: To empower product architects to make informed choices about technology stacks that best fit their project needs.
- Enhance Efficiency: To streamline the technology evaluation process, reducing the complexity and time involved in selecting the right tools.
- Support Data-Driven Decisions: To leverage AI and data analytics in guiding architects toward optimal technology solutions.

Business Benefits

- Increased Productivity: By reducing the time spent on research and evaluation, architects can focus on high-value tasks, boosting overall productivity.
- Faster Time-to-Market: Accelerated project timelines lead to quicker delivery of products and services, enhancing competitive advantage.
- Improved Decision-Making: Data-driven insights enable architects to make confident, informed decisions, reducing the risk of technology misalignment.
- Cost Efficiency: Streamlined processes and optimized technology selection can lead to cost savings in project execution.
- Enhanced Collaboration: Facilitates better communication and collaboration among teams by providing a clear framework for technology selection.

Key Features

- AI-Powered Recommendations: Utilizes artificial intelligence to provide tailored technology stack suggestions based on project requirements.
- Data-Driven Insights: Delivers actionable insights and analytics to support informed decision-making.
- Streamlined Evaluation Process: Simplifies the research and evaluation of technology options, reducing time and effort.
- User-Friendly Interface: Intuitive design that enhances user experience and facilitates easy navigation.
- Accelerated Project Timelines: Significantly shortens the time required for technology stack selection, enabling faster project initiation.

EY Data Migration Tool for SAP SuccessFactors

EY Data Migration Tool for SAP SuccessFactors is a global data asset tool that helps the clients to simplify the complex migration process of migrating the client's HR specific data like Employee central from any legacy system to SAP SuccessFactors. The tool improves the overall process efficiency of migration by automating various process steps of migration like validation, transformation and mapping etc thereby reducing the total time and cost incurred for the migration project.

Fields of Play

1. Organization and People
2. Strategy and Transformation
3. Technology

Product version | **2603**

Business purpose

- Accelerate Go-to-market strategy for SF migration projects
- Supports lower cost of migration
- Overall improvement in migration process efficiency
- Automates the manual steps of migration
- Reduce the migration project timelines

Business benefits

- Guided data entry - Business users do not need to know technical dependencies. Pre-defined templates guide users through specific scenarios.
- Reliable - HR data before updating or changing data in SuccessFactors, records are being validated to ensure data accuracy.
- Automated - Automatically manages technical dependencies and data sequencing required to manipulate data in SAP SuccessFactors
- Controlled process - All mass updates are completed in one place. Guarantees full control of data changes with the help of reconciliation dashboard

Key features

- Supports Employee Central Data migration to SuccessFactors
- Foundational objects migration
- Built in validation and transformation rules
- Error handling
- Reconciliation dashboard for tracking

EY Enterprise Dashboard Center

The EY Enterprise Dashboard Center is a collaborative solution that enables CFOs and business managers to access important information in one place. It integrates data from various sources, including both SAP and non-SAP systems, to clearly display key performance indicators (KPIs). An AI voice assistant helps users quickly process data and make informed decisions, while the platform fosters a boardroom-like environment for effective teamwork.

Business purpose

- EY Enterprise Dashboard Center is an immersive and collaborative prototype where C-suite leadership, business process managers, chief product officers, and others will have business-relevant information at their fingertips.
- The EY Enterprise Dashboard Center is equipped with real-time data stored from SAP S/4HANA.
- Artificial intelligence (AI) is utilized to enhance the analysis of KPIs displayed within 3D panels and charts, predict future values using predictive analytics, and control the prototype to create dynamic panels and charts through AI-assisted voice commands. SAP S/4HANA and an AI core are being utilized for these purposes.

Business benefits

- C-suite leaders and business process managers will have insights and business-relevant information in one place, eliminating the need to access multiple reports to view the information.
- They will be able to identify and investigate the root causes of customer issues with the help of a dependency map.
- There is also the ability to access data from multiple sources, both SAP and non-SAP, and integrate it to create a broad view of all the business-relevant KPIs.
- AI-powered voice assistance will enhance data processing and help in making faster, more informed decisions.
- Furthermore, collaboration in an immersive environment will help create a boardroom-like experience.

Key features

- Track and analyze near real-time data (both SAP and non-SAP).
- Enhanced decision-making due to real-time data.
- Real-time alerts for predefined critical situations.
- Data integration with standard solutions (e.g., SAP, ServiceNow).
- A dependency map to investigate the root causes of issues.
- An immersive and collaborative prototype.
- AI-powered virtual assistance that will help to generate dynamic panels and graphs.
- Flexible user search with AI-assisted voice command.
- Automated data sharing (executive summary report) via email using AI.
- Data comparison with multiple graphs.
- Translation from any language to English.

EY ERP Agent powered by SAP

EY ERP agent **powered by SAP** delivers AI-driven intelligence that unifies data, insights and decision-making across the enterprise. Powered by a network of connected context agents, it integrates seamlessly with various data sources to provide real time analytics and actionable recommendations. Through a single intuitive chat interface, stakeholders gain instant access to business-critical information, enabling faster, smarter decisions.

Fields of Play

1. Customer and Growth
2. Finance
3. Organization
4. Strategy and Transformation
5. Technology

Product version

2603

Business purpose

- Slow response to market changes.
- Difficulty in sharing insights.
- Data overload and analysis paralysis.
- Data silos and integration issues.
- Inefficient data analysis.
- Limited accessibility to data insights.

Business benefits

- Integrated Data Analysis: The platform offers real-time analysis of diverse data sources, both SAP and non-SAP, enabling seamless integration and a unified view for enhanced decision-making.
- Simplified User Experience: The intelligent virtual assistant allows users of varying technical expertise to interact with the system using simple voice commands, democratizing access to data insights.
- Accelerated Insight Delivery: The platform facilitates data sharing by generating executive summary reports and distributing them via email, streamlining communication and ensuring that key stakeholders are informed.

Key features

- Track and analyze near real-time data (both SAP and non-SAP).
- Enhanced decision-making due to real-time data
- Data integration with standard solutions (e.g., SAP, ServiceNow).
- AI-powered virtual assistance that helps in the generation of on-demand data and graphs.
- Flexible user search with AI-assisted voice commands.
- Automated data sharing (executive summary report) via email using AI.
- Translation from any language to English.
- Document and image reading.
- Flexible integration with any third-party application.
- User-friendly interface.

EY ESG Materiality Manager

The EY ESG Materiality Manager, powered by SAP technology, assists organizations in conducting a double materiality assessment to analyse their sustainability impacts, risks, and opportunities. This assessment evaluates the effects of an organization on both the environment and society, along with sustainability-related risks and opportunities that affect the organization. Additionally, the reporting feature offers the results of the assessment to ensure compliance.

Business purpose

- The double materiality assessment is a framework used for evaluations, usually performed offline through tools like Excel or SharePoint. Furthermore, the results from the assessment are shared with auditors to validate the final conclusions.
- The SAP technology-supported EY ESG Materiality Manager facilitates a straightforward evaluation process with structured end-to-end workflows and reporting capabilities for compliance and export options. This tool includes audit logs to assist with auditing.

Business benefits

- Simplify ESG evaluation: Rapidly evaluate numerous ESG issues across worldwide operations.
- Maintain compliance: Adhere to stringent regulations such as CSRD, ISSB, GRI, and more.
- Enhance stakeholder confidence: Demonstrate to investors, regulators, and customers that you are committed to both financial and social responsibilities.
- Anticipate risks proactively: Detect ESG risks before they escalate into financial crises.

Key features

- Smart AI usage for value chain, IRO generation
- Retrieval augmented generation for rationale using documents uploaded
- Workflow features for easy review and approval mechanism
- Master data setup on the tool for company and segment creation
- Reporting feature to get the final assessed results real time
- Over view for assessment results and work status review

EY Finance Data Hub - Reconciliation

EY Finance Data Hub - Reconciliation is an AI based reconciliation tool designed to automate and streamline the process of comparing data from different sources to identify and resolve discrepancies. It leverages Agentic AI design patterns, combining technologies like large language models (LLMs), pattern recognition models and chatbots to deliver an intelligent, scalable reconciliation solution.

Fields of Play

1. Finance
2. AI
3. Reconciliation

Product version | **2506**

Business purpose

- Highlights the severe consequences of accounting errors with emphasis of financial and reputational risks.
- Automatic error or detection, real-time correction suggestions. It emphasizes the system's ability to learn and adapt, ensuring long-term effectiveness.
- It is a tool for mitigating risks.
- It helps in streamlining of the audit process, in terms of reduction of man hours needed to audit, and correct errors.

Business benefits

- Time and Cost Saving: Reconciliation is time taking activity and labour-intensive process. AI can enable users to make faster decisions and focus on more strategic tasks.
- Enhanced Financial Control: EY Finance Data Hub - Reconciliation provides a clear audit trail, improving transparency and accountability. This tool analyses the data patterns and provides un-matched records for user action.
- Streamlined Processes: It allows for faster identification and resolution of discrepancies and leads to a smoother and more efficient close process.

Key features

- Identification of dimensions and measures from source and target.
- Pattern recognition in dataset using ML models.
- Reconciliation report for matched and un-matched records.
- Optimization techniques using LLM's for un-matched records.
- Audit trail support.
- Vector database to hold rules for reconciliation.

EY HR Assistance with Social Media Integration

EY HR Assistance with Social Media Integration integrates with social media and leverages AI and Generative AI to improve the candidate experience, streamline recruitment, and enhance HR engagement. AI-powered insights help analyze feedback, enabling data-driven decisions for better hiring and employee satisfaction.

Business Purpose

- In many cases, HR teams face challenges due to limited integration with social platforms and the absence of comprehensive AI capabilities. Organizations often rely on manual scanning of social media messages, leading to inefficiencies and delayed responses.
- HR teams struggle with fragmented recruitment processes, inefficient candidate engagement, and inconsistent employer branding across social media platforms. Manual job postings and tracking lead to delays, while candidates face poor visibility into their application status. Employees lack easy ways to share job openings, reducing referrals.

Business Benefits

- AI-driven social media engagement brings the best experience for any potential candidate.
- Automated engagement improves candidate experience and employer branding.
- AI analyzes social media sentiment to provide real-time business feedback.
- Helps organizations make data-driven decisions to improve policies and workplace culture.
- Encourages employees to share experiences, fostering a transparent work environment.
- AI-driven analysis helps HR address concerns and improve employee satisfaction.
- Reduces dependency on manual scanning, saving time and resources.

Key Features

- Automated job posting & tracking on social media platforms (LinkedIn).
- AI automatically replies to potential candidates and handles FAQs.
- AI-powered candidate engagement.
- Feedback capture from social media users.
- AI analyzes candidate and public sentiment.

EY Infrastructure Optimization Tool

The EY Infrastructure Optimization Tool is designed to automate user management and system provisioning, enabling organizations to enhance time efficiency and achieve significant cost savings in their infrastructure operations. By leveraging automation, this tool simplifies complex processes, allowing IT teams to focus on strategic initiatives rather than routine administrative tasks.

Fields of Play

1. Technology

Product Version | **2503**

Business Purpose

- Streamline Operations: Automates and simplifies user management and system provisioning processes, enhancing operational efficiency.
- Reduce Administrative Burden: Frees up IT resources from repetitive tasks, allowing them to focus on more strategic initiatives.
- Enhance Resource Utilization: Optimizes the use of infrastructure resources, ensuring that organizations get the most value from their investments.

Business Benefits

- Increased Productivity: By automating routine tasks, IT teams can allocate more time to critical projects, boosting overall productivity.
- Faster Time to Value: Rapid provisioning of systems allows organizations to respond quickly to business needs and market changes.
- Cost Savings: Optimized resource allocation leads to reduced operational costs, contributing to improved financial performance.
- Improved User Experience: Faster access to systems enhances user satisfaction and supports business continuity.
- Proactive Management: Real-time monitoring enables organizations to identify and address issues before they escalate, ensuring smooth operations.

Key Features

- Automated User Management: Streamlines the administration of user accounts and permissions, reducing manual intervention.
- Rapid System Provisioning: Facilitates the quick deployment of infrastructure resources, ensuring timely access for users.
- Enhanced Time Efficiency: Minimizes delays in user access and resource allocation, improving overall operational speed.
- Cost Optimization: Achieves savings through better resource utilization and reduced operational overhead.
- Simplified Workflow Management: Provides intuitive workflows for managing user access and system configurations.
- Real-Time Monitoring and Reporting: Tracks user activity and system performance, enabling proactive management and decision-making.

EY IntelliGEN SAP Support

EY IntelliGEN SAP Support involves direct integration of the SAP S/4HANA system with the chatbot and employs AI algorithms to analyze errors and patterns, pinpointing the underlying causes of these errors while also providing guided or automated corrections.

Business Purpose

- Improved System Stability and Uptime: By identifying potential issues early, the assistant helps prevent system downtime and disruptions.
- Enhanced Efficiency: The assistant can learn from past errors and their resolutions, continuously improving its ability to identify and resolve future issues. Intelligent SAP Support aims to transform error management from a reactive and often time-consuming process into a proactive, efficient, and automated function.
- Support Data-Driven Decisions: To leverage AI and data analytics to streamline and automate the process of identifying, analyzing, and resolving errors within SAP systems (across all modules and business purposes).

Business Benefits

- Improved User Experience: Provides users with quick and relevant answers to their queries through natural language processing and intelligent knowledge base search, reducing reliance on manual support channels.
- Faster Time-to-Market: Streamlined business processes help facilitate quick and wise decisions.
- Improved Decision-Making: Identifies potential issues and providing pre-emptive recommendations or solutions, minimizing disruptions.
- Efficiency: Automating the handling of frequently asked questions, initial issue diagnosis, and basic troubleshooting steps, freeing up human support agents for more complex issues. Also reduces ticket volume.
- Enhanced Collaboration: Offers continuous support regardless of time zones, improving accessibility 24/7.

Key Features

- AI-Powered Recommendations: Utilizes artificial intelligence to provide informed decisions and suggestions for error resolution.
- Data-Driven Insights: Provides interactive, step-by-step instructions to help users diagnose and resolve common issues. KBA developed by EY and SAP Joule responses is not as effective as correction steps provided by our product.
- Streamlined Evaluation Process: Automatically categorizes incoming support tickets based on the issue description and routing them to the appropriate support teams or specialists.
- User-Friendly Interface: Comprehends user queries expressed in natural language (text or voice). Maintaining context within a conversation to provide relevant follow-up questions and solutions without requiring users to repeat information.
- Accelerated Project Timelines: Recommending specific actions, configuration changes, or SAP Notes to resolve identified errors.

EY Intelligent Dispute Manager

The EY Intelligent Dispute Manager, powered by the SAP® GenAI hub, revolutionizes the way companies handle disputes by transitioning from a reactive, manual process to an AI-driven, proactive, and automated workflow. This innovative solution enhances customer experience, boosts operational efficiency, and mitigates financial risks, ultimately driving better business outcomes. By harnessing the power of artificial intelligence, the EY Intelligent Dispute Manager provides actionable insights and automates workflows, allowing teams to focus on strategic initiatives rather than getting bogged down in manual tasks. With real-time monitoring and reporting, businesses can swiftly address disputes before they escalate, ensuring a seamless resolution process.

Fields of Play

1. Finance
2. Supply Chain and Operations

Product version | 2506

SAP Validated

Partner Use Case

SAP Certified

built with SAP Business AI

Business purpose

- **Proactive Dispute Management:** Transforms the traditional reactive and manual dispute-handling process into an AI-driven, proactive approach that anticipates and addresses disputes before they escalate.
- **Automation of Workflows:** Streamlines and automate dispute resolution workflows, reducing the burden on teams and enhancing overall efficiency.
- **Enhanced Decision-Making:** Leverage artificial intelligence for better insights and data-driven decisions in managing disputes.

Business benefits

- **Improved Customer Experience:** By resolving disputes more efficiently and proactively, companies can enhance customer satisfaction and loyalty.
- **Operational Efficiency:** Automation reduces manual effort, allowing teams to focus on higher-value tasks and improving overall productivity.
- **Financial Risk Mitigation:** Proactive dispute management helps identify and address potential issues early, reducing the risk of financial losses associated with unresolved disputes.
- **Error reduction:** The AI-driven system minimizes human errors in data entry and interpretation, leading to more accurate dispute resolutions.
- **Cost savings:** By streamlining the dispute process, businesses can save on operational costs associated with manual dispute handling.

Key features

- **Seamless Integration:** Effortlessly connect Microsoft Outlook with SAP Dispute Management for a unified dispute resolution experience.
- **AI-Powered Text Interpretation:** AI reads and understands text communications, automating data entry and decision-making processes.
- **AI-Powered Insights:** Utilizes SAP® GenAI to analyze data and provide actionable insights for better dispute management.
- **Automated Workflows:** Streamlines the dispute resolution process through automation, minimizing manual intervention and errors.
- **Real-Time Monitoring:** Offers real-time tracking and reporting of disputes, enabling timely responses and informed decision-making.

EY Intelligent Working Capital Dashboard

EY Intelligent Working Capital Dashboard is an innovative platform leveraging artificial intelligence to propose strategies to improve the working capital of an organization. It is designed to analyze the impact of multiple KPIs on working capital. The platform delivers data-driven insights and recommendations, enabling architects to make informed decisions with confidence. The goal is to enhance productivity by significantly reducing research and evaluation time, thereby accelerating the business.

Business Purpose

- Optimize Technology Selection:** To empower finance businesses to make informed choices about working capital.
- Enhance Efficiency:** To streamline the finance business process accounts payable, accounts receivable, reduction of bad debts, fixed asset optimization, current assets management, loans management, inventory optimization; thus reducing the complexity and time involved in selecting the right strategy to improve cost of working capital.
- Support Data-Driven Decisions:** To leverage AI and data analytics in guiding architects toward optimal technology solutions.

Business Benefits

- Increased Productivity:** By reducing the time spent on research and evaluation, finance people can focus on higher-value tasks, streamlining business process.
- Faster Time-to-Market:** Streamlined business process helps to take quick and wise decisions.
- Improved Decision-Making:** Data-driven insights enable confident, informed decisions, reducing the risk associated with working capital.
- Cost Efficiency:** Streamlined processes and optimized working capital can lead to cost savings for the business.
- Enhanced Collaboration:** Facilitates better communication and collaboration among teams by providing a clear impact on working capital.

Key Features

- AI-Powered Recommendations:** Utilizes artificial intelligence to provide informed decisions on working capital.
- Data-Driven Insights:** Delivers actionable insights and analytics to support informed decision-making.
- Streamlined Evaluation Process:** Simplifies the research and evaluation of working capital, reducing time and effort.
- User-Friendly Interface:** Intuitive design that enhances user experience and facilitates decision-making.
- Accelerated Project Timelines:** Significantly shortens the time required for decision-making and improves business performance.

Fields of Play

1. Customer and Growth

Product Version | 2503 |

Business Purpose

- In the current digital era, people extensively engage with social media. Businesses may encounter challenges if they lack full integration with social media, coupled with comprehensive AI features.

Problem Statement in Service - Ticket Creation

- The business faces operational inefficiencies due to the lack of integration with social media platforms for creating support tickets.
- Customer issues and inquiries raised through platforms like Facebook, Twitter, and Instagram are not captured in a structured or timely manner. This results in delayed responses, unresolved issues, and diminished customer satisfaction.

Problem Statement in Service - Lead Creation

- The business is unable to capitalize on potential leads generated from social media interactions, leading to missed revenue opportunities as valuable prospects are either overlooked or lost in the process.

Business Benefits

- Enhanced customer relationships.
- Improved customer service. (Reduce ticket resolution time).
- Enhanced lead/ticket generation process.
- Improved customer retention and loyalty.
- Increased sales opportunity & sales revenue.
- Competitive advantage.
- Increased revenue growth.
- Early alerts and notification.

Key Features

- Integrated SAP with social media to create leads and tickets, leveraging the AI capabilities.
- AI features like NLP are utilized to find important information in text, and sentiment analysis to understand how people feel about certain topics or brands, along with sentiment percentage score.
- AI-driven content recognition is used for efficiently classifying the diverse content types across social media channels, providing us with a comprehensive understanding of user interactions and content trends.

EY Sales & Service Assistance with Social Media Integration

EY Smart Automation Hub

A single solution for creating automation and workflow bots for any business task across all S/4 HANA modules (Finance, MM, SD, PS etc), featuring a chatbot interface backed by AI.

Business Purpose

- Almost all automation solutions need to be designed and built individually for each business requirement.
- Long lead times for maintenance and modifications of automations.
- High costs associated with complex IT infrastructure for handling multiple automation solutions.

Business Benefits

- Continuous Improvement: Ability to review and create more automations.
- Example Uses Cases: Escheatment process (USA), FERC Accounting (USA) (complete accounting process, not just deriving account symbols from FERC website), predictive purchase optimization, pricing (sales order), and dispute management (complete intelligent solution identifying pricing mistakes and disputes).
- Instant creation of automation bots with no code.
- Standardization and efficient maintenance of automations in system.
- Scalable sector-agnostic solution.

Key Features

- Plug and play with S/4, solution is built on consuming standard SS APIs and function modules.
- The solution leverages large language models to bridge the gap between business requirements and technical execution in S/4HANA.
- AI models extract information from SAP-specific KBAs with high accuracy and translate the natural language inputs provided by business users into technical executable programs.

EY Smart Candidate Sourcing and Ranking for SAP SuccessFactors

EY Smart Candidate Sourcing and Ranking for SAP SuccessFactors enhances the efficiency of the hiring process by utilizing advanced artificial intelligence (AI) technology to assist recruiters in identifying the most suitable candidates for job openings; it screens and categorizes candidates into three groups—"best fit," "moderate fit," and "low fit"—based on tailored criteria that align with client requirements, while also recommending candidates from the recruitment system for newly created job postings, ensuring that no potential candidate is overlooked.

Business purpose

The process of finding the ideal candidate for a job often proves to be a time-intensive task for recruiters and hiring managers. When a new job offer is posted on the company portal, it may not reach all the candidates who have registered in the past. This tool is designed to shortlist suitable candidates for a new job posting in the recruitment system, ensuring that no potential candidate is overlooked.

Business benefits

- **Efficiency:** Streamline recruitment process, to help enable the rapid and automated screening of applicants, freeing up recruiter's time to focus on higher-value tasks.
- **Adaptability:** Provide flexibility to tailor the screening criteria according to the client-specific needs.
- **Productivity:** Will significantly reduce the recruitment process timeline from sourcing candidates to their successful hiring.
- **Cost savings:** Efficient recommendations lead to faster hiring cycles, reducing costs associated with prolonged vacancies. Additionally, automated systems can support large volumes of data without additional manpower.

Key features

- Scoring and ranking algorithm that will categorize candidates based on their profiles and alignment with the skills, qualifications and expectations of the job requisition.
- Customized cloud application to read the client preferences described in custom SuccessFactors fields in terms of critical parameters to be considered while recruitment process.

EY Smart Customer Experience

EY Smart Customer Experience empowers businesses with AI-driven insights to optimize product performance, streamline allocation, boost agent productivity, and maximize profitability through intelligent pricing, margin tracking, and market competitiveness. This tool strengthens CRM managers and sales leaders to make faster, smarter, and more profitable decisions while improving customer satisfaction and market competitiveness.

Fields of Play

1. Customer and Growth

Product Version | **2509**

Business purpose

- Enhances product visibility through real-time performance dashboards and predictive insights.
- Optimizes allocation and order management by leveraging AI for demand forecasting, priority customer identification, and simplified agent workflows.
- Maximizes profitability by balancing pricing, discounts, and margins with market competitiveness.

Business benefits

- Fragmented visibility into product performance, margins, and customer demand makes it difficult for managers to take timely decisions.
- Inefficient product allocation across regions and channels often results in stockouts in high-demand markets and overstock in low-demand ones.
- Accurate Pricing and discounting decisions are largely manual, causing margin leakages and missed opportunities for revenue optimization.
- Strengthens market position through continuous competitor tracking, customer feedback analysis, and market share insights.
- Drives sales productivity by aligning agent incentives and commissions with business goals.
- Enables data-driven decisions by integrating AI/ML recommendations for next-best actions and personalized offers.
- Lack of predictive insights prevents businesses from proactively forecasting demand, prioritizing orders, and delivering personalized offers to customers.
- Agent productivity and commissions are not always aligned with business priorities, leading to reduced motivation and uneven sales focus.

Key features

- Product Performance Monitoring
 - Real-time dashboards on sales, revenue & feedback
 - Trend analysis: top vs. low-performing products
 - AI-driven product recommendations
 - Pipeline demand & product forecasting (AI/ML)
 - Expected revenue projections
 - Competitor analysis & market share insights
- Product Allocation
 - Balanced supply across regions & channels
 - AI to prioritize customers & orders
 - Simple order allocation screen for agents
- Adjust Pricing & Discounts
 - Track profit margins
 - Targeted discounts where required
 - Optimize pricing to stay competitive
- AI-Driven Recommendations
 - Predictive insights for next-best actions
 - Personalized offers per customer segment
- Track Agent Performance & Commission
 - Monitor individual agent contribution.
 - Ensure fair and transparent commission payouts.

EY Smart Data Prediction

EY Smart Data Prediction a feature of EY FRAC is an intelligent data correction assistant designed to reduce accounting errors that can lead to poor investment decisions, reputational risks, and regulatory penalties. Leveraging advanced neural networks, this feature automatically detects anomalies, identifies inconsistencies, and suggests accurate corrections for journal entries in real time. The system continuously learns from user actions, ensuring ongoing improvement and adaptability to evolving datasets, ultimately enhancing financial accuracy and compliance.

Business Purpose

- Highlights the severe consequences of accounting errors, emphasizing financial and reputational risks.
- Automatic error detection as well as real-time correction suggestions. It emphasizes the system's ability to learn and adapt, ensuring long-term effectiveness.
- It is a tool for mitigating risks.
- It helps in streamline the audit process by reducing the man hours needed to audit and correct errors.

Business Benefits

- Reduced Financial Risk
- Enhanced Data Integrity and Reliability
- Improved Decision-Making
- Increased Efficiency and Productivity
- Strengthened Regulatory Compliance
- Enhanced Reputational Value
- Cost Reduction
- Proactive Risk Management
- Competitive Advantage

Key Features

- Automatic Error Detection
- Intelligent Correction Suggestions
- Real-Time Analysis
- Neural Networks-Powered Learning
- Data Integrity
- Audit Trail Support
- Data Consistency Checks
- Anomaly Detection

EY Smart Inspection and Maintenance

The proposed solution is a mobile application for field/on-site inspection and maintenance engineers equipped with features to access asset historical data stored in SAP, inspection tasks, checklists and guided maintenance. AI is used in the form of chatbot, through which engineers can search through asset manuals and documentation.

Business Purpose

- EY SIM reduces long downtimes due to the lack of on-site knowledge among field engineers. With the potential to contact remote experts in the future, EY SIM is a game changer for field engineers.

Business Benefits

- Maintenance and inspection engineers no longer need to carry paper manuals or uncomfortable devices such as laptops to access asset documentation.
- Identifying the root cause of machine breakdowns is easy with on-site access to asset historical data that sits in different systems.
- Good knowledge sharing and streamlined access to documentation on predefined procedures and processes make maintenance and planned inspections faster and easier to complete.

Key Features

- Track historical and near-real-time asset health during the on-site inspection.
- Remote/mobile access to data from SAP systems.
- Inspection and maintenance task list with the ability to document inspection progress.
- Guided troubleshooting and inspection tasks optimize accuracy and time, ensuring better asset familiarity for technicians.
- 3D models of assets and exploded model visualizations to check what is inside the part and how to inspect it.
- AI co-pilot helping with searching through asset manuals and documentation.

EY Smart Onboarding App

EY Smart Onboarding App is a mobile application that makes the virtual employee onboarding process experience-driven, automated, organized, and efficient.

Fields of Play

1. Organization and People

Product version | **2506**

Business purpose

- Lack of a structured onboarding process and numerous of manual tasks to complete.
- Issues with navigating virtual communication during the onboarding phase.
- Lack of support during onboarding, especially during IT setup.
- Lack of engagement and personalization during onboarding.
- Information overload.

Business benefits

- The HR team can save time and costs by uploading necessary information to the application rather than sending by post.
- The HR team can save time in processing information regarding new hires by downloading the completed forms from the application rather than waiting for them to arrive by post.
- Higher retention rates lead to lower expenses in rehiring for the same roles due to a better onboarding experience.
- A simpler and better-structured communication channel with all new hires.

Key features

- New hires can check the real-time status of the onboarding checklist and upload relevant documents via the mobile application.
- AI is being used for a FAQ chatbot and advanced process automation (OCR) on uploaded documents.
- Relevant stakeholders are automatically notified about status changes in the onboarding process based on roles. New hires can access contact information to the hiring manager, new team, onboarding buddy, and others.

EY Smart Package Tracer

EY Smart Package Tracer is an innovative track-and-trace application designed to empower companies in the fight against counterfeit products within their supply chains. Leveraging the power of blockchain technology and advanced computer vision, our counterfeit detection platform ensures that every product's journey is securely documented and easily verifiable. With blockchain, companies can maintain a tamper-proof record of each product's history, providing unparalleled transparency and security. Meanwhile, our user-friendly computer vision technology allows consumers to effortlessly scan products with their smartphones, instantly verifying authenticity and fostering trust in the brand.

Business Purpose

- **Counterfeit Detection:** Provides a reliable solution for companies to identify and eliminate counterfeit products within their supply chain.
- **Supply Chain Transparency:** Enhances visibility and traceability of products from origin to consumer, ensuring authenticity and integrity.
- **Consumer Trust:** Empowers consumers with the ability to verify product authenticity, fostering trust in the brand and its offerings.

Business Benefits

- **Reduced Losses:** Minimizes financial losses associated with counterfeit products, protecting both revenue and brand reputation.
- **Enhanced Security:** Utilizes blockchain technology to create a secure and tamper-proof record of product history, reducing the risk of fraud.
- **Improved Customer Experience:** Enables consumers to easily verify product authenticity through scanning, enhancing their overall purchasing experience.

Key Features

- **Blockchain Integration:** Provides a secure and decentralized method for tracking product authenticity throughout the supply chain.
- **Computer Vision Technology:** Allows consumers to scan products using their smartphones to quickly check for counterfeiting.
- **Real-Time Tracking:** Offers real-time updates and alerts regarding product status and authenticity, ensuring timely responses to potential issues.

EY Smart Rule Generator

EY Smart Rule Generator is an intelligent automation solution that proposes and generates complex business rules for end users based on the data source in consideration. This solution comes in handy during phase-0 assessments. It leverages Generative AI (GenAI) capabilities to enhance the efficiency of business teams and functional consultants in identifying, suggesting, and creating optimal business rules, thereby streamlining the data profiling process and providing data quality insights.

Business purpose

The existing tools used for data profiling require good technical knowledge of SAP and SQL. In addition, it also requires a significant amount of manual effort, making the data profiling process slow with the possibility of incorrect results. EY Smart Rule Generator is an AI-powered solution that helps end users overcome these issues by proposing and generating logically complex data profiling rules that otherwise could be overlooked by a human analyst.

Business benefits

- **Business Rules Suggestion:** Suggests various data profiling scenarios based on the data source.
- **Simplified Rule Creation Process:** Based on the rule description selected by the user, the application generates and executes the end-to-end data profiling pipeline, significantly reducing human intervention and associated errors.
- **Accessibility:** Even users with limited knowledge of SAP table structures/schema and SQL can effectively use the solution.
- **Reduced Effort and Time:** The use of Smart Rule Generator can significantly decrease the manual effort and time required for profiling business rules. The performance of the application was enhanced by 80% (approximately from 15 mins to 2.5 mins for the same sample).
- **Ease of Use:** Intuitive user interface for data profiling.
- Designed to be used for master data from multiple enterprise systems.

Key features

- Ability to process the data uploaded as flat files (csv, xlsx) or the data provisioned via Smart Data Integration (SDI).
- An intelligent solution that can scan client's legacy data and propose the data profiling that could be performed on the data.
- Based on the selected rule, the AI engine generates the corresponding SQL, which is further utilized to generate profiling results and data quality insights.
- This solution can also perform deduplication analysis and assist with other frequently encountered scenarios.
- Role-based access helps users to focus on assigned areas, making the approval process quick and simple, with users able to create their own business rules to govern the master data.

EY Translation Hub

The EY Translation Hub is a versatile web-based tool that automates file translations. The platform comprises two distinct user roles: Admin/Initiator and Approver. The Admin/Initiator initiates the translation process, which is further sent to Approver who approves the translated content. All translations are stored in a database for future use.

Business purpose

By enabling product managers to upload their files to the platform, the EY Translation Hub replaces the existing manual translation process with automation. This not only saves time but also enables managers to track the progress of translations and reduce costs.

Business benefits

- With the new system, projects no longer have to send multiple emails or maintain multiple spreadsheets to obtain accurate translations.
- The AI enabled solution facilitates translations with confidence score which helps admin/approver to validate the translation with better accuracy.
- Once translations are approved, they are saved in the database to expedite future translation processes.
- A streamlined workflow process has been implemented to increase efficiency and reduce errors.

Key features

- Track historical and real time translations
- Manage multiple translation requests under a single Project ID
- Seamless upload and download functionality of translation sheets
- Secure login to the app with segregated access based on user role
- Integrated AI Translation service to provide translation with confidence score for better accuracy.
- Mail notification to required stakeholders whenever there is update on the translated text/file.

EY Sales Quote Discounts Predictor

EY Sales Quote Discounts Predictor is an AI-based intelligent quote data analytics and pricing generation. The solution provides automated and AI-generated pricing generation for quotes. AI-based quote discounting prediction solution leverages historical data refined by LLM to share the best possible discounts for categorized customers and companies.

Business purpose

- Currently, the quote creation process for sales agents involves entering quote items manually.
- Additionally, there are challenges with virtual communication with customers regarding item recommendations, and separate time is needed to check the 360 view for accessing specialized pricing.
- Searching products manually in the quote and then applying discounts one by one requires extra time and increases the chances of manual error by the sales agent.

Business benefits

- Optimizes profit margins.
- Promotes frequent reorders.
- Helps create a competitive edge in the marketplace.
- Cost savings on shipping.
- Increases brand value, preference, and loyalty.
- Aims to satisfy current investors and attract new ones.
- Generates long-term recurring value for all stakeholders.
- Promotes customer retention by rewarding long-term customers.

Key features

- Past consumer experience and spending analytics are used to streamline current quote predictions.
- AI can predict trends and customer behavior by analyzing data patterns. This helps businesses anticipate market changes, optimize inventory, and create targeted marketing campaigns.
- The AI model provides analytics for future consumption based on historical data.
- It aims to give new customers immediate access to AI-based product recommendations during the onboarding process.

EY Customer Communication Agent

EY Customer Communication Agent is an agentic AI-powered product, enabling customers to connect with businesses anytime, on any channel (WebChat, WhatsApp, or Phone), in their preferred language—with AI agents and live support.

Business purpose

- The purpose of EY Customer Communication Agent is to empower utility companies to deliver seamless, intelligent, and customer-centric interactions by combining agentic AI with live human expertise.
- By integrating with core systems like SAP S/4HANA and SCV2, it ensures real-time service visibility, faster resolutions, and personalized experiences across any channel and language.
- This solution enables utility companies to reduce costs, improve satisfaction, and scale operations, creating stronger customer trust and long-term value.

Business benefits

- Enhanced customer satisfaction** - Deliver faster, accurate, and personalized responses through AI-powered conversations in any channel.
- Seamless integration** - Connect directly with SAP S/4HANA and SCV2 to provide real-time service updates and data-driven insights.
- Scalable support** - Balance automation with human expertise, enabling utility companies to handle growing customer demands effortlessly.
- Consistency and reliability** - Ensure uniform experiences across chat, call, and WhatsApp, regardless of the interaction type.
- Future-ready operations** - Leverage NLP-driven virtual assistance for human-like conversations, preparing utility companies for next-gen customer engagement.
- Cost efficiency** - Reduce service costs by automating routine inquiries and optimizing live agent workload.

Key features

- 24*7 accessibility**: Customers can connect with businesses anytime, ensuring uninterrupted support.
- Omnichannel experience**: Seamless interaction across Webchat, WhatsApp, and Phone for convenience.
- Personalized assistance**: AI agents and live support provide tailored responses in the customer's preferred language.
- Faster issue resolution**: Self-service workflows and AI-driven automation reduce wait times and improve efficiency.
- Enhanced customer satisfaction**: Proactive engagement and multilingual support create a smooth, user-friendly experience.

EY Manufacturing Defects Guard

The EY Manufacturing Defects Guard is an innovative solution designed to enhance serial number tracking and defect management across industries. Leveraging AI and ML, it tracks materials using serial numbers, ensuring comprehensive traceability and accountability. The tool reads shop floor documents, tags relevant details to process orders, and integrates with SAC for real-time monitoring of complaints. AI-driven defect analysis helps identify root causes and implement corrective actions, reducing recurrence. This solution streamlines document management, improves process efficiency, and boosts product quality, making it ideal for manufacturing, automotive, electronics, and pharmaceutical industries.

Fields of Play

1. Customer and Growth
2. Risk
3. Strategy and Transformation
4. **Supply Chain and Operations**
5. Technology
6. Transactions

Product version 2506

Possible CH1 usage
Yes

 **Sector**
Industrials & Energy -
Industrial Products

 **Business contact**
Stefano Venchi

 Product manager
Krishnendu Das

Business purpose

- Currently Industries won't have a standard solution to track the serial numbers based on header and components details. This solution will help to track the materials with the serial number and the AI/ML can help to create a defect for complaints and track similar defects for customer complaints.
- Read the Shopfloor papers (physical documents) to fetch the relevant details and tag to the respective process or order.

**Business
benefits**

- AI will help to Analyze Defects and corrective actions. AI will help to prevent the frequent Defects.
- AI will help to read the Shop floor documents from the shared folder files.
- SAC dashboard for complaints details.
- Track Header and components details with serial numbers.

Key features

- AI/ML will predict exact trend of defect like assembly line, work center issues, vendor defects etc..
- It will suggest predictive action for minimizing the defect
- Focus to 3. For any specific machine what we need to check that can point out by reading trouble shoot guide for corrective action/preventive action etc. reduce defects related to specific plants for specific period.
- Capture details from the shopfloor documents.
- Similar defects of materials will be analyzed by AI/ML model Fast action on customer complaints
- Capture details from the shopfloor documents.
- Similar defects of materials will be analyzed by AI/ML model for customer complaints.
- Capture details from shopfloor papers for internal Complaints.
- Quick defect analysis.
- Track the serial number details for raw material with PO, GRN & vendor details etc for Vendor Complaints.
- Track the serial number details for SFG/FG with production details like components detail, work center/assembly lines, plant, manufacturing dates, production order details.
- Defect analysis based on the Quality notification process.
- Fast action on customer complaints.

EY Revenue Assurance as a Service

EY Revenue Assurance as a Service is an AI-powered BTP Application which features Level 1 and Level 2 dashboards tailored for utility companies, automating the identification of potential fraud without manual checks. It processes inputs, correlates findings, and navigates between executive and diagnostic dashboards, maintaining base criteria for fraud evaluation. This system streamlines the verification of business partners, detects suspicious transactions, and automatically flags high-risk cases for further investigation in the FCM, significantly reducing time and error compared to manual methods.

Business purpose

Within the Utilities space in SAP there is a need to have a cumulative analysis when predicting the defaulters and meter frauds. The utility companies are incurring heavy losses in developing countries due to meter frauds and payment default. The EY Revenue Assurance as a Service will be a one place solution to predict the trends early on and utility companies can take prior action.

Business benefits

- This cloud application uses Machine learning models curated to identify suspected fraud cases in the utilities.
- The SAC component embedded in the application will provide insight on customer and financial insights of a utility company.
- The case creations and their resolutions will be managed within the application.
- The application will be a holistic solution for risk management and deterring the financial losses by detecting fraudulent trends early.

Key features

- BTP cloud-based application with SAP HANA cloud connected to S/4 and C4C for real time data.
- Full fledged case management for suspicious customers
- AI-driven customer risk insights - which gives the summary for risk agents to understand why this customer was flagged as suspicious
- AI based recommendations and actions to be followed by risk consultants for suspicious customers.
- UI application for admins(risk consultants) to customize the AI models based on their needs.
- Curated AI models for utility companies to choose.
- Customer-Level Exception → a feature that allows specific suspicious customers to be marked as exceptions and temporarily excluded from the case creation process unless they exceed a defined risk threshold. This functionality enables businesses to tailor the solution according to their internal guidelines and provides flexibility to ignore certain kind of inconsistencies

EY Smart Customer Experience for Utilities

EY Smart Customer Experience for Utilities connects providers and customers, delivering seamless experiences and driving operational efficiency. From outage alerts to revenue and consumption forecasting, empower your teams to deliver smarter, more personalized customer experiences.

Fields of Play

1. Customer and Growth
2. Technology

Product version | 2603

Business purpose

- **Outage Notifications:** Customers face frustration due to lack of timely updates on planned and unplanned outages.
- **Payment Reminders:** Missed or delayed payments are common due to absence of automated reminders.
- **Dunning & Aging Insights:** Ineffective debt recovery and poor visibility into overdue accounts impact revenue collection.
- **Consumption & Churn Analysis:** Utilities struggle to identify high-risk customers due to limited insights into usage and churn trends.

Business benefits

- **Better Customer Experience** - Real-time updates and personalized engagement.
- **Faster Revenue Collection** - Automated reminders and dunning insights.
- **Higher Retention** - Predictive churn analysis and proactive outreach.
- **Accurate Revenue Forecasting** - Reliable financial insights via BTP.
- **Streamlined Operations** - Integrated CRM, IS-U, and automation.
- **Modern UI** - Responsive, user-friendly React JS interface.
- **Real time Outage notification** and Updates on WhatsApps , Phone and Emails.

Key features

- **Outage Alerts:** Real-time customer notifications for planned and active outages via Service Cloud V2 and SAP S/4 Plant Maintenance integration.
- **Payment Reminders:** Automated alerts sent to customers through Service Cloud V2, with updates reflected in Customer 360 for better engagement.
- **Dunning Dashboard:** Centralized view of billing and ageing to monitor collections and drive effective recovery planning.
- **Churn Insights:** Predictive churn analysis enables proactive customer communication, improving retention and overall experience.
- **Demand Forecasting:** AI-powered forecasting based on IS-U consumption data to support accurate load and resource planning.
- **Revenue Prediction:** Reliable revenue projections using BTP analytics for improved financial planning and decision-making.
- **User Interface :** Modern, responsive frontend built on React JS for intuitive and seamless user interaction across devices.

EY Smart Customer Experience for Utilities

EY Smart Industrial Asset Suite

EY Smart Industrial Asset Suite is a solution for monitoring and managing industrial assets across multiple industries. It offers customizable overviews, client-defined alerts, real-time tracking of maintenance requests, AI-driven anomaly detection and efficient visualization of asset data. SIAS integrates IoT, field inspections and SAP-based maintenance processes to provide a unified operational view. It also supports solar farm monitoring and photovoltaic simulation, extending the solution into renewable energy scenarios.

Fields of Play

1. Supply Chain and Operations
2. Sustainability

Product version | **2603**

Business purpose

- The need to make faster decisions based on accessible and consolidated operational data.
- The volume of data is large, and a single facility can generate thousands of data points.
- There is limited ability to personalize the dashboards on which data is displayed.
- Manual analysis of operational data is time-consuming and risky, as important details may go unnoticed.
- Organizations need digital transformation supported by a unified operational platform for monitoring, analysis and maintenance execution.

Business benefits

- Improved efficiency in data collection and reporting.
- Enhanced visibility and accessibility of data across different business units.
- Improved collaboration across teams through centralized asset insights and shared operational context.
- Customized alerts for quick identification and resolution of issues.
- Better decision-making through outcome-based views and personalized dashboards.
- Increased accountability with the ability to assign and track actions.

Key features

- AI-powered failure prediction and anomaly detection with contextual operational insights.
- Client-defined alerts and configurable monitoring thresholds.
- Solar farm monitoring and photovoltaic simulation, including farm-level and string-level energy production visibility.
- Automated maintenance request workflow with routing, confirmation / rejection steps and diagnostic enrichment.
- Drone inspection workflow linked to alerts and maintenance requests.
- AI assistant with document search and remediation guidance to support faster incident resolution.
- Integration with SAP S/4HANA Asset Management and smart inspection / maintenance mobile workflows for field engineers.

EY Smart Utilities FERC Assistance

EY Smart Utilities FERC Assistance Chatbot streamlines compliance by providing instant guidance on FERC code classification and update requirements. It leverages AI to answer regulatory queries and ensure accurate financial reporting in real time.

Business Purpose

- Utility companies face challenges in accurately classifying operational and financial data according to FERC codes.
- The complexity of adapting to frequent FERC code updates and the lack of advanced data analytics further complicate the process, leading to potential regulatory penalties and operational inefficiencies.
- Businesses face challenges in managing frequent FERC code updates, and the manual nature of current systems increases the risk of fines, delays, and operational issues.

Business Benefits

- Instant Information:** Provides immediate answers to FERC-related queries.
- Compliance Assurance:** Reduces the risk of non-compliance through real-time guidance.
- Efficiency Boost:** Automates routine tasks, saving time for staff.
- Consistent Messaging:** Ensures uniform responses across the organization.
- Up-to-Date Guidance:** Automatically updates with the latest FERC regulations.
- Training Resource:** Serves as a self-service training tool for new employees.
- Data Insights:** Collects data on common inquiries to identify knowledge gaps.

Key Features

- Instant FERC Code Lookup:** Users can quickly search for specific FERC codes and their descriptions, reducing the time spent on manual searches and improving accuracy.
- Interactive Chatbot for FERC Code Search:** Users can significantly improve document retrieval processes, enhance productivity, and create a more efficient working environment in utilities sector.

EY Tailings Storage Facility Management

As part of the EY Smart Industrial Asset Suite, the Tailings Storage Facility Management feature helps mining companies efficiently collect and manage facility data, streamline compliance and auditing processes, and make informed decisions through personalized dashboards and AI-driven analysis. By leveraging integrated IoT data and advanced analytics, this capability enhances safety, operational efficiency, and regulatory compliance for tailings facilities.

Business purpose

- Data is isolated and siloed across different business units or mining facilities across the organization.
- The volume of data is large. A single TSF site will have thousands of data points and a mining company may manage over 200 TSF facilities.
- There is very little automation of data collection. Data is collected and stored in physical logbooks or an Excel spreadsheet.
- Manual data collection for reporting takes too long.
- Mining companies need to undergo digital transformation, of which TSF is a small but important part.

Business benefits

- Improved efficiency in data collection and reporting
- Enhanced visibility and accessibility of data across different business units
- Streamlined compliance and auditing processes
- Customized alerts for quick identification and resolution of issues
- Better decision-making through outcome-based views and personalized dashboards
- Increased accountability with the ability to assign and track actions

Key features

- Managed TSFs summary
- Client-defined alerts, including AI failure prediction
- Outcome-based views
- AI-driven compliance analysis and reporting
- Persona or role-based dashboards
- Maintenance management and facility equipment management
